

## Did Iggy Azalea Get More Than a Boob Job? Plastic Surgery Experts Weigh in!

Info-celebrity.com

Every Friday, we'll bring you **plastic surgery** experts dissecting your favorite celebrities and the procedures they may have gotten done!

This week, we take a look at 25-year-old rapper **Iggy Azalea**.

Iggy Azalea (2012 vs. 2015) Forehead: "It looks like she's had Botox injections [up to \$2,000 a year] around her eyebrows," notes **Philadelphia plastic surgeon Dr. Lyle M. Back**, who has never treated the star. He also suspects Iggy may have had a "brow lift" and her "eyes done." Nose: "That's a major nose job!" pronounces Dr. Back, who has also not worked with Iggy. Houston's Dr. Mirwat Sami — who has also not worked with Iggy — agrees that Iggy's had "nose reconstruction surgery or cosmetic rhinoplasty." Price? \$12,500. Chin: In addition to plumping up her midface and upper lip, says Dr. Sami, "Iggy now has a more prominent chin, which could be from either an implant [\$7,000] or fillers [\$4,000]." Bust: "Prior to implants, Iggy was reportedly a size 32B," notes Dr. Back. "She now appears to be a D- to DD-cup, which is more proportionate to her 5-foot-10 frame." Cost: \$15,000.
